

# Solar power generation Three Gorges Dam demolition

## Overview

---

According to the news from Gansu Province on Phoenix Net, the construction personnel at the site of the 100MW tower molten salt energy storage solar thermal power generation project of the 700,000-kilowatt “Solar Thermal Energy +” project of Three Gorges Hengji. According to the news from Gansu Province on Phoenix Net, the construction personnel at the site of the 100MW tower molten salt energy storage solar thermal power generation project of the 700,000-kilowatt “Solar Thermal Energy +” project of Three Gorges Hengji. China's installed wind and solar power capacity has reached a scale equivalent to around 82 Three Gorges Dam projects, according to the latest data released by the National Energy Administration. By the end of 2025, the country's installed solar power capacity had risen to 1. 20 billion kilowatts. Recognized as one of the monumental engineering achievements of modern times, the Three Gorges Dam, in China, harnesses the immense power of the Yangtze River and its colossal scale is such, that it can be seen from space. The construction of the Three Gorges Dam was driven by practical utility and. The Three Gorges Dam, [a] officially known as Yangtze River Three Gorges Water Conservancy Project[b] is a hydroelectric gravity dam that spans the Yangtze River near Sandouping in Yiling District, Yichang, Hubei province, central China, downstream of the Three Gorges. Construction began on the dam in 1994, and building was completed in 2008.
