

# Solar power generation installed on both sides of the cabinet

## Overview

---

Unlike traditional panels, bifacial designs capture sunlight from both sides, using reflected light to boost energy output by up to 30%. With higher efficiency and the potential to lower overall system costs, bifacial solar panels are becoming a compelling solution for sustainable. The idea of bifacial solar panels dates back to the 1960s but only gained real momentum in the early 2000s. Bifacial panels can work on your roof, but not if they're installed flush.
