

Solar power generation interconnection

LFP12V100

Overview

Interconnection standards define how a distributed generation system, such as solar photovoltaics (PVs), can connect to the grid. This. Please use this link to access the Grid Interconnection Processing Tool. Please see the Rule 21 page for more information regarding submittal of Rule 21. Interconnection is the complex process of connecting new electricity generators – like wind, solar, and energy storage – to the electric grid. This allows solar systems to fully integrate and operate seamlessly within a larger electrical infrastructure and further advances the transition to a more sustainable energy system. with 75 percent of distributed.
