

# Solar power generation is maintenance-free for life

## Overview

---

While solar arrays are generally “maintenance-free,” it's still important to conduct regular check-ups. For instance, wind can blow debris onto the solar panels, causing them to be blocked from sunlight. Also, the panels can become chipped or scratched from animals. Solar farms have the potential to provide clean, renewable energy for several years with minimal maintenance. Here's a breakdown of what you can expect. Premium panels deliver superior long-term value: While premium panels with 0.25% degradation rates cost 10-20% more upfront, they produce 11.5% more electricity over 25 years compared to standard panels, often justifying the higher initial investment through extended productive life and better. As of 2025, understanding solar panel degradation remains crucial when investing in solar, even as industry strides extend panel lifespans. Using solar energy has two main benefits: Solar energy systems do not produce air pollutants or carbon dioxide.
