Overview

Instead of converting sunlight directly into electricity, as photovoltaics does, solar thermal harnesses the sun's energy to heat a fluid called a heat carrier and then uses that heat to generate electricity or provide heat for industrial or domestic applications. While the two types of solar energy are similar, they differ in their costs, benefits, and. Solar energy is the radiation from the Sun capable of producing heat, causing chemical reactions, or generating electricity. If suitably harnessed, solar energy has the. The sun radiates heat but, beyond the evidence, solar thermal is an increasingly popular renewable energy source.
