

Space Solar Power Generation Solution

Overview

Multiple countries and companies are investing billions in space-based solar power (SBSP), and the first demonstration systems could be operational by 2030. This might be the most ambitious energy project in human history. Utilizing SBSP entails in-space collection of solar energy, transmission of that energy to one or more stations on Earth, conversion to. Space-based solar power (SBSP or SSP) is the concept of collecting solar power in outer space with solar power satellites (SPS) and distributing it to Earth. It sounds like science fiction.
