

Special process of photovoltaic panels

Overview

They use this sunlight to create direct current (DC) electricity through a process called "the photovoltaic effect. These modules have several manufacturing steps that typically occur separately from each other. Polysilicon Production - Polysilicon is a high-purity, fine-grained crystalline silicon product, typically in the shape of rods or beads depending on the method of production. " Because most appliances don't use DC electricity, devices called inverters then convert it to.
