

Thousand acres of fish pond solar power generation

Overview

An ambitious fishery-solar farm hybrid in China is now fully connected to the grid. Beijing-based company Dajin Heavy Industry claims the project represents an extremely efficient land utilization. A maze of brackish and freshwater ponds covers Taiwan's coastal plain, supporting aquaculture operations that produce roughly NT \$30 billion (US \$920 million) worth of. The fishery-solar hybrid system is the combination of photovoltaic power system and fish ponds. The general form is photovoltaic panels on the top of the fish pond. Department of Energy / NREL overview, floating photovoltaic systems and "AquaPV" (solar combined with aquaculture) can lower energy costs at farms, reduce evaporation, shade ponds from extreme heat, and generally strengthen local food -and-energy security.
