

Weathering steel photovoltaic bracket

Overview

Weathering steel photovoltaic bracket, as the name suggests, is made of weathering steel after research and development and production, with the mechanical properties of high-quality steel, atmospheric corrosion resistance is 2 to 8 times that of carbon steel, and the longer. Weathering steel photovoltaic bracket, as the name suggests, is made of weathering steel after research and development and production, with the mechanical properties of high-quality steel, atmospheric corrosion resistance is 2 to 8 times that of carbon steel, and the longer. Using weathering steel as a material for photovoltaic mounting structures eliminates the need for anti-corrosion coating treatment, resulting in faster construction timelines and being environmentally friendly without pollution. Weathering steel, also known as atmospheric corrosion-resistant steel. The invention discloses rare earth weathering steel for a photovoltaic bracket, which comprises the following chemical components in percentage by mass: C: 0.0%, P: less than or equal to 0.0005%. Hot dip. Contact FEMP for assistance with on-site solar PV systems. Covers how on-site solar photovoltaic (PV) system's surface break down by the process known as weathering. Weathering is usually divided to fulfill the required grade of the mechanical properties. Solar photovoltaic bracket is a special bracket designed for placing, installing and fixing solar panels in the solar photovoltaic power generation system.
