

# What does photovoltaic panel efficiency relate to

## Overview

---

Put simply, solar panel efficiency measures how much sunlight hitting the surface of a panel is converted into usable electricity. If a panel is rated at 20% efficiency, that translates to one-fifth ( $20/100$  or  $1/5$ ) of the solar energy striking it is turned into electrical power. The efficiency of the solar cells used in a photovoltaic system, in combination with latitude and climate, determines the annual energy output of the. It affects how much electricity your system generates, how much roof space you'll need, and ultimately, how much you'll save over time. Modern panels reach 18–23% efficiency.
