

# What other generators are there in solar power plants

## Overview

---

Photovoltaic: They use photovoltaic solar panels to directly convert sunlight into electricity through the photoelectric effect. This capability makes them a crucial element in the move towards more sustainable and eco-friendly energy sources. There are two primary classifications of solar generators: portable and home backup. All solar thermal power systems have solar energy collectors with two main components: reflectors (mirrors) that capture and focus sunlight onto a receiver. These systems are typically used as alternative or backup power sources in off-grid settings, emergency situations, and outdoor activities.
