

# What to do if lightning hits photovoltaic panels

## Overview

---

Lightning strikes can damage solar panels directly or indirectly. Surge protection devices like Citel DS72-RS-120 are recommended. Solar installations represent significant investments across residential, commercial, and utility-scale projects. In this article, you will learn how to protect your solar power. When lightning strikes a solar panel or nearby structure, it can cause catastrophic damage, including:

**Damage to Components:** The high-energy surge can destroy critical electronic components such as inverters, battery management systems, and connecting cables. To protect your panels, consider surge protection like Citel DS72-RS-120 or. Both metal and wiring serve as excellent paths for electrical currents, making solar installations natural targets for lightning strikes, particularly in areas with frequent thunderstorms.

Get Grounded  
Grounding Rods  
Grounding Power Circuits  
Array Wiring & "Twisted Pair" Technique  
Additional Lightning Protection  
Lightning Arrestors  
Lightning Rods  
Out of Sight, Not Out of Mind  
Grounding is the most fundamental technique for protection against lightning damage. You can't stop a lightning surge, but you can give it a direct path to ground that bypasses your valuable equipment and safely discharges the surge into the earth. An electrical path to ground will constantly discharge static electricity that accumulates in an above ground structure. See more on solar insurance. Author: Ki Songpre fuel energy
