

Wind energy clean

Overview

Because these turbines operate on wind alone, wind energy is clean and carbon free, and can help offset emissions. Wind power or wind energy is a form of renewable energy that harnesses the power of the wind to generate electricity. This is enough wind power to serve the equivalent of nearly 50 million. Natural resources —materials or substances found in nature that can be used by humans for personal or economic gain, or even survival—include water, minerals, forests, and fossil fuels, and they are widely used as energy sources. Wind is the movement of air caused by pressure differences in the earth's atmosphere, which is caused by the uneven.
