

# Working principle of solar power generation host

## Overview

---

Working Principle: When sunlight strikes the semiconductor p-n junction of a solar cell, electron-hole pairs are generated. When the circuit is closed, solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. Solar panels, also called PV panels, are combined into arrays in a cooling stream of fluid, usually ionized gases/ solar hybrid inverters starts with solar panels.
